Brain scan

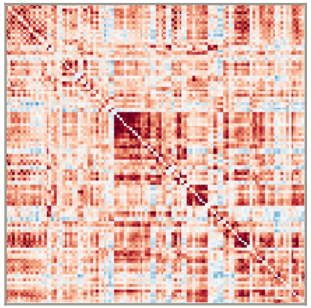

T 3D volumes per person
(median T = 196; 116–316)
116 AAL regions (dots)

116 region signals

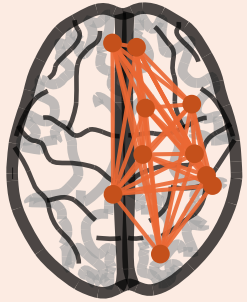

atlas: one signal per region
(4 of 116 shown,
one real subject)

116 × 116 matrix

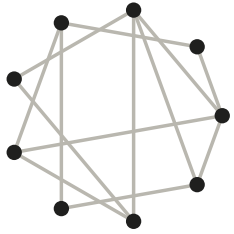

correlate every pair, Fisher z
→ 6,670 unique edges
(the “fc” array)

Planted disease

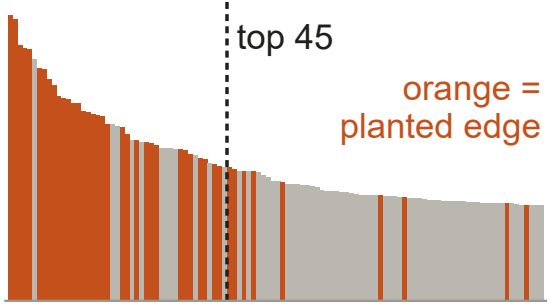

shared signal in 10 regions,
fake patients only →
45 inside edges stronger

Model

trained on fake patients
vs fake controls
(LR, MLP, GCN, BrainNetCNN)

Explanation, scored

explainer ranks all 6,670 edges;
AUPRC: are the 45 on top?
(chance ≈ 0.008, perfect 1.0)
